and Distributed  
Assurance  
Platform**

# Mobileum's RAID Risk Management Platform

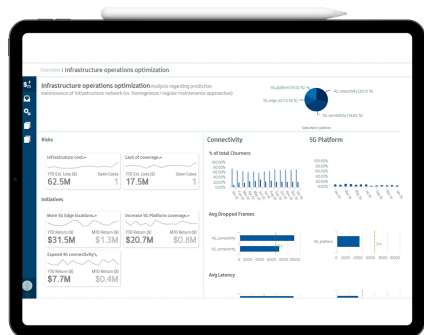

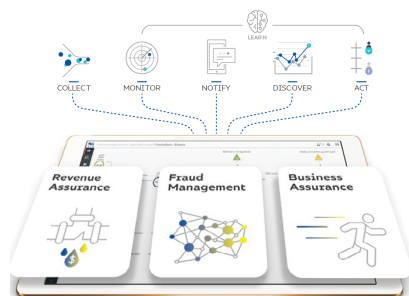

AIDA is evolving RAID, a platform developed by Mobileum for risk management and continuous control monitoring in organizations, as they leverage edge computing and 5G technologies for monetization.

## About RAID Platform

RAID for fraud and risk intelligence is powered by Mobileum's Active Intelligence big data analytics Platform. Specifically designed for the telecom risk management sector, RAID allows to analyze and manage data to support real-time business assurance, while minimizing data redundancy, hardware, and IT operations. RAID is all-in-one software that collects data across business applications and platforms to provide detailed monitoring of business activity to help improve corporate performance and customer experience.

**RAID is the next generation Risk Management software and can be deployed both on-premises or in the cloud**

## Key Features

Data Collection and Processing  
Monitoring and Measuring Tools  
Validation Engines  
Adaptive Case Management  
Dashboarding and Reporting  
AI/ML and Rules
